Software Engineering Institute | **Carnegie Mellon University**

Software Solutions Symposium 2017

March 20–23, 2017; Arlington, Virginia

The Software Solutions Symposium is a forum for learning about emerging technologies and practical solutions that you can apply today for help with systemic software issues such as assurance, cost, and schedule. Leading experts in the field of software engineering will present their vision and experiences.

This symposium is for you if your organization wants to

- assure quality, timeliness, trust, and affordability in current and future systems that rely on software;

- learn about common pitfalls and proven strategies for successfully upgrading legacy IT systems;

- learn about high-value methods, technical innovations, and practices; and

- network with expert speakers and peers outside of formal sessions.

The Software Solutions Symposium also offers you the opportunity for your staff members to use the time away from the office for team building and information sharing.

We can help your organization schedule a dedicated meeting room so that your staff can attend the conference and tutorials and then regroup during breaks to share information among themselves. Packages are currently available for groups of 10 or more that include discounted conference and tutorial registration plus a dedicated meeting room for your group. Meeting rooms can be reserved for the entire week or for just one or two days, as available.

Start planning for a week of team building by reserving your place at the Software Solutions Symposium 2017!
