

SEI BULLETIN - FEBRUARY 22, 2017

CERT Releases Updated Insider Threat Guidebook

The CERT Division of the Software Engineering Institute (SEI) at Carnegie Mellon University today announced the release of the fifth edition of the [Common Sense Guide to Mitigating Insider Threats](#), which is available for download on the SEI website. The *Guide* describes 20 practices that organizations should implement across the enterprise to prevent and detect insider threats, as well as case studies of organizations that failed to do so.

“The new edition of the *Guide* comes at a critical time for organizations developing insider threat programs,” said Randy Trzeciak, technical manager of the CERT Insider Threat Center. “The insider threat landscape has changed considerably since the previous edition, especially with new directives that government and government-contractor organizations must follow.”
