SEI Bulletin — May 2, 2018

Agile and DevOps: Your Questions. Our Answers.

Meeting business needs and adapting to the speed of the market for new features requires an agility mindset and continuous-delivery techniques throughout application-development lifecycles. Many believe that Agile means Scrum and DevOps means continuous deployment. Agile and DevOps can make these terms sound very different. However, Agile is more about process and methodology whereas DevOps focuses on how to reduce time to market with automation mechanics. These approaches are generating more and more questions in DoD environments with respect to regulation and security on large-scale programs. Do they complement each other? Is there any relationship between them? Should one be done before the other?

In this lively webinar discussion, the SEI's Hasan Yasar and Eileen Wrubel field attendee questions on all things Agile and DevOps.

About the SEI Bulletin

The SEI Bulletin is a biweekly newsletter designed to keep you up to date on SEI news, events, research, and other matters of interest to the SEI community. We hope you find the SEI Bulletin useful and informative.

Send Us Your Story

Do you have a story about how an SEI technology has positively affected your team or organization? If so, the SEI would like to hear about it. Send a short summary of your success to info@sei.cmu.edu and you could be featured in a future issue of the SEI Bulletin.

Our mailing address is

Software Engineering Institute | Carnegie Mellon University | 4500 Fifth Avenue, Pittsburgh, Pa. 15213
