Cyber Intelligence Report Outlines Best Practices and Biggest Challenges

Cybersecurity is not cyber intelligence, and many organizations lack the people, time, and funding to build a cyber intelligence team. These are among the top findings in a report on cyber intelligence practices released today by the Software Engineering Institute (SEI) at Carnegie Mellon University. The SEI conducted the study on behalf of the U.S. Office of the Director of National Intelligence (ODNI).

“By understanding what’s working and what’s not working and looking at how to implement emerging technologies, we can help strengthen the practice of cyber intelligence across the country,” said Jared Ettinger, the lead author for the study.

About the SEI Bulletin
The SEI Bulletin is a biweekly newsletter designed to keep you up to date on SEI news, events, research, and other matters of interest to the SEI community. We hope you find the SEI Bulletin useful and informative.

Send Us Your Story
Do you have a story about how an SEI technology has positively affected your team or organization? If so, the SEI would like to hear about it. Send a short summary of your success to info@sei.cmu.edu, and you could be featured in a future issue of the SEI Bulletin.
Our mailing address is

Software Engineering Institute | Carnegie Mellon University | 4500 Fifth Avenue, Pittsburgh, Pa. 15213
