SEI Bulletin — April 15, 2020

# DevSecOps in Highly Regulated Environments

A [technical report](#) recently released by the SEI details how to implement development, security, and operations, or DevSecOps (DSO), into software systems of systems within highly regulated environments.

According to *Guide to Implementing DevSecOps for a System of Systems in Highly Regulated Environments*, “DSO is a socio-technical system that integrates development, security, and operations in support of a continuous integration, continuous delivery (CI/CD) environment. DSO promises a high return on investment but requires a significant shift in existing culture, process, and technology.”

Highly regulated environments, such as those in classified defense projects, present a number of constraints on the typical software development lifecycle. The report addresses the creation and operation of a single, dedicated pipeline architecture that can be adopted and scaled to support multiple products in highly regulated environments.

## About the SEI Bulletin

The SEI Bulletin is a biweekly newsletter designed to keep you up to date on SEI news, events, research, and other matters of interest to the SEI community. We hope you find the SEI Bulletin useful and informative.

## Send Us Your Story

Do you have a story about how an SEI technology has positively affected your team or organization? If so, the SEI would like to hear about it. Send a short summary of your success to [info@sei.cmu.edu](mailto:info@sei.cmu.edu), and you could be featured in a future issue of the SEI Bulletin.
