2020 Research Review Showcases the SEI's Fundamental Research

November 25, 2020 — The Software Engineering Institute held its annual Research Review the week of November 9. The four-day, virtual event featured 30 presentations and panels on the institute's fundamental research conducted for the Department of Defense in fiscal year 2020. Topics include artificial intelligence and advanced computing, cybersecurity, software development, and Agile and DevOps development. The [presentation decks and posters](#) are available for download in the SEI's Digital Library, and [videos of the sessions](#) are available on the SEI's YouTube channel.

"We dig into the enduring challenges facing the DoD, and our decades-long engagement has informed our deep and nuanced understanding of the challenges it faces," wrote SEI Chief Technical Officer Tom Longstaff in a summary of the event's featured projects. "Our research springs from the DoD's need for software innovation and cybersecurity that continually evolves in support of its intensifying mission."
