Surveying Systems Engineering Effectiveness

Joseph P. Elm

Sponsored by the U.S. Department of Defense © 2005 by Carnegie Mellon University

Background

Case studies have shown that properly implemented systems engineering can result in commensurate benefits

Broadly applicable quantification of these costs and benefits remains elusive

- Complicated by the lack of a broadly accepted definition of Systems Engineering
- Insufficient identification and tracking of Systems Engineering costs and efforts
- Exacerbated by increasing complexity and size of systems and Systems of Systems

The Task

The Office of the Under Secretary of Defense (AT&L) has tasked the NDIA Systems Engineering Division to research and report on the costs and benefits associated with Systems Engineering practices in the acquisition and / or development of military systems.

The Systems Engineering Effectiveness Committee (SEEC) is addressing this task via a survey of program and project managers across the defense industry.

Survey Objective

Identify the degree of correlation between the use of specific systems engineering practices and activities on projects, and quantitative measures of project / program performance.

Survey Method

Use the resources of NDIA SE Division to reach a broad constituency

The initial survey will focus on industry members of NDIA that are prime contractors and subcontractors

Collect feedback from project / program managers

Survey Development Plan

- Define the goal
- Choose the population
- Define the means to assess usage of SE practices
- Define the measured benefits to be studied
- Develop the survey instrument
- Execute the survey
- Analyze the results
- Report
- Plan future studies

Step 1:

Define the Goal

Identify correlations between SE practices and program performance

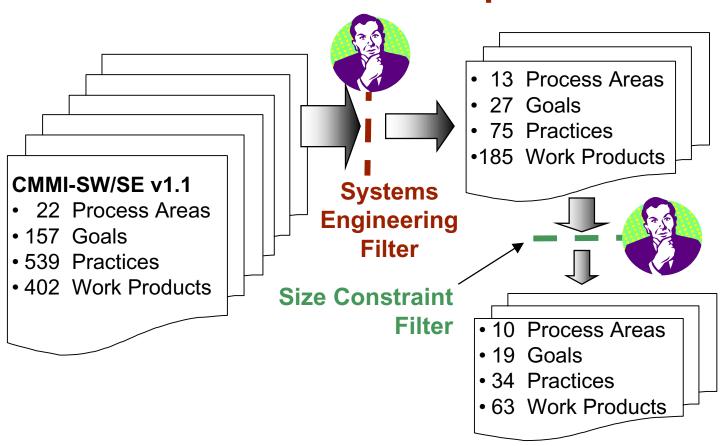

Step 2:

Choose the population

Chosen population consists of contractors and subcontractors providing products to the DoD

Define assessment of SE practices

Step 4:

Define performance measures

Utilize measures common to many organizations

- Earned Value
- Award Fees
- Technical Requirements Satisfaction
- Milestone Satisfaction
- Problem Reports

Step 5:

Develop the survey instrument

Self-administration

formatted for web-based deployment

Confidentiality

- No elicitation of identifying data
- Anonymous response collection
- Responses accessible only to authorized SEI staff

Integrity

- Data used only for stated purpose
- No attempt to extract identification data

Self-checking

Section 1

Project Characterization

Section 2

Systems Engineering
Evidence

Section 3

Project / Program
Performance Metrics

Section 1 - Characterization

Characterization of the project / program under consideration

Project / program

- Size
- Stability
- Lifecycle phase
- Subcontracting
- Application domain
- Customer / User
- -etc.

Organization

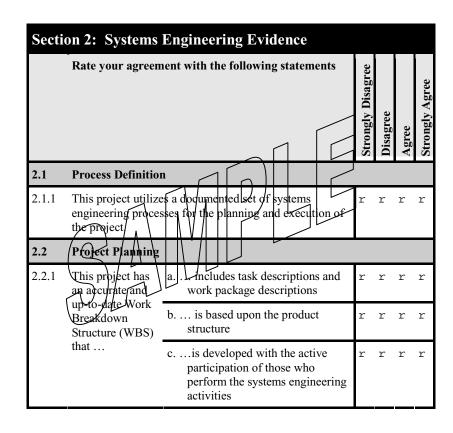

- -Size
- Organizational capability
- Related experience
- etc.

consider	ective of this section is to gather information to characterize the project under ration. This information will assist the survey analysts in categorizing the project, executing organization to better understand your responses.					
1.1	Project – information to characterize the specific project under discussion. Size, stability, lifecycle phase, subcontracting, and application domain are among the parameters used for program characterization.					
1.1.1	What phases of the integrated product lifecycle comprise this project (check all that apply), and what phase are you presently executing (check 1)? Concept Refinement Technology Development and Demonstration					
1.1.2	What is the current total contract value (US\$) of \$					
1.1.3	What was the initial contract value (US\$) of your \$project?					
1.1.4	How many contract change orders have been received?					

Section 2: SE Evidence

Process definition
Project /program planning
Risk management
Requirements development
Requirements management
Trade studies
Interfaces
Product structure
Product integration
Test and verification
Project / program reviews
Validation
Configuration management

Section 3: Performance Metrics

Earned Value

Award fees

Technical requirements satisfaction

Milestone satisfaction

Problem reports

Section 3: Project Performance Metrics							
3.1	Earned Value Management System (EVMS)						
	Rate your agreement with the following statements	Strongly Disagree	Disagree	Agree	Strongly Agree		
3.1.1	Your customer requires that you supply EVMS data?	r	r	r	r		
3.1.2	EVMS data is available to decision makers in a timely manner (i.e. current within 2 weeks)?	r	r	r	r		
3.1.3	The requirement to track and report EVMS data is levied upon the project's suppliers.	r	r	r	r		
3.1.4	Variance thresholds for CPI and SPI variance are defined, documented, and used to determine when	r	r	r	r		

Software Engineering Institute

Step 6: * Report to include suggested **Execute the survey** recommendations and actions Provide Contact focals. Identify Report* **NDIA SED** brief the web SEEC Expedite Expedite Industry findings to active roster survey access NDIA and Members response response process, solicit data to OSD focals NDIA mg't support focals input ndustry Solicit Report # focal Identify respondents Expedite Expedite respondents and provide responses and report # response response provided web site to SEI access info to SEI Respondent Complete report completion questionnaire and submit to SEI to focal. Analyze data Collect responses and response rate and report to SEI data SEEC

Step 7:

Analyze the results

Partition responses based on project characterizations

Analyze survey responses to look for correlations between the SE practices and the chosen metrics.

Step 8:

Report

Summarize survey results and analysis in a report.

Step 9:

Plan future studies

Based upon the findings from the survey, the need for additional studies may be defined.

Status

Survey instrument development complete

Web deployment complete

Respondent identification in progress

Response collection through Nov.

Analysis through Dec. and Jan.

Report in Feb.
