Patching ImageMagick

Fuzzed old ImageMagick with the CERT BFF fuzzer

- 1 week
- 130,000 crashes found

Manually patched all vulnerabilities

- Took approximately one month
- 31 patches/vulnerabilities

Vulnerability Discovery Science

Analyze fuzzing parameters

- What mutators work best?
- When should we stop fuzzing?
- What effect do compiler settings have?

SMART

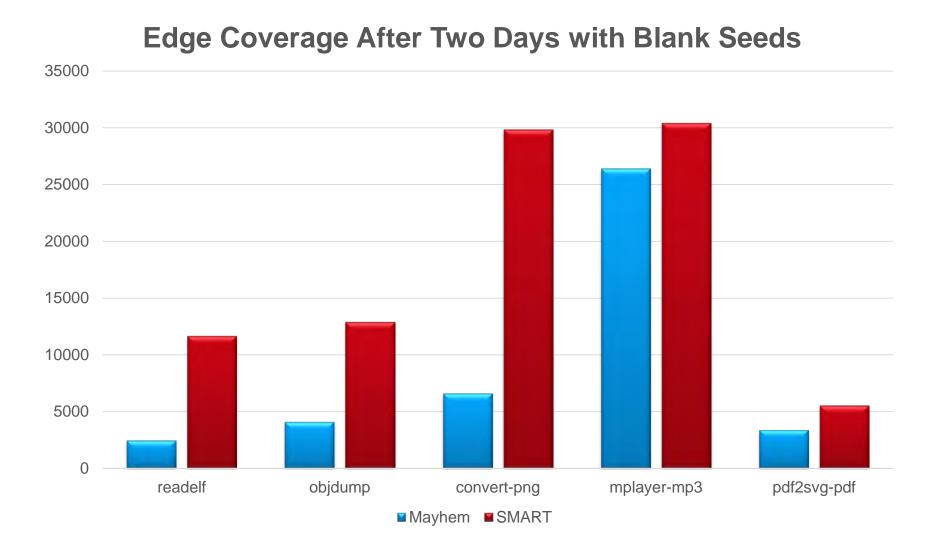

The Synergistic Mayhem AFL Research Tool

- Concolic execution: Mayhem (ForAllSecure+SEI)
- Fuzzing: AFL
- Periodically synchronize seed files between them

Challenges

- 1. Where to go?
 - We don't know the location of vulnerabilities
- 2. How much should we use concolic execution?
 - ~10⁴ times slower than fuzzing
 - Brute force vs. high cost

SMART Evaluation
