Increasing globalization 

SEI Works in Several Core Technical Areas

**Autonomy &
Counter-
Autonomy**

**C4ISR Mission
Assurance**

**Cyber
Missions**

**Data
Modeling &
Analytics**

**Human-
Machine
Interactions**

**Software &
Information
Assurance**

**Systems
Verification &
Validation**

Combine to Provide Software and Cyber Capabilities

Context

- **Definition*:** The level of confidence that software functions as intended and is free of vulnerabilities, either intentionally or unintentionally designed or inserted as part of the software throughout the life cycle.
- **Perspective:** Persistent pursuit of software quality assurance is a constant struggle
- **Future:** Software enabled systems underpin the cyber environment, enabling explorations into new frontiers

Software Assurance is a Constant Purpose, and Software-Enabled Systems are Moving Targets

- Constant purpose
 - Software assurance provides the required level of confidence that software functions as intended (and no more) and is free of vulnerabilities, either intentionally or unintentionally designed or inserted in software, throughout the lifecycle*
- Moving target
 - The changing and expanding role that software plays in cyberspace means that the development of software-enabled systems must continue to evolve while we pursue software quality

*Source: DoDI 5200.44 Protection of Mission Critical Functions to Achieve Trusted Systems and Networks (TSN), and 2013 NDAA S933

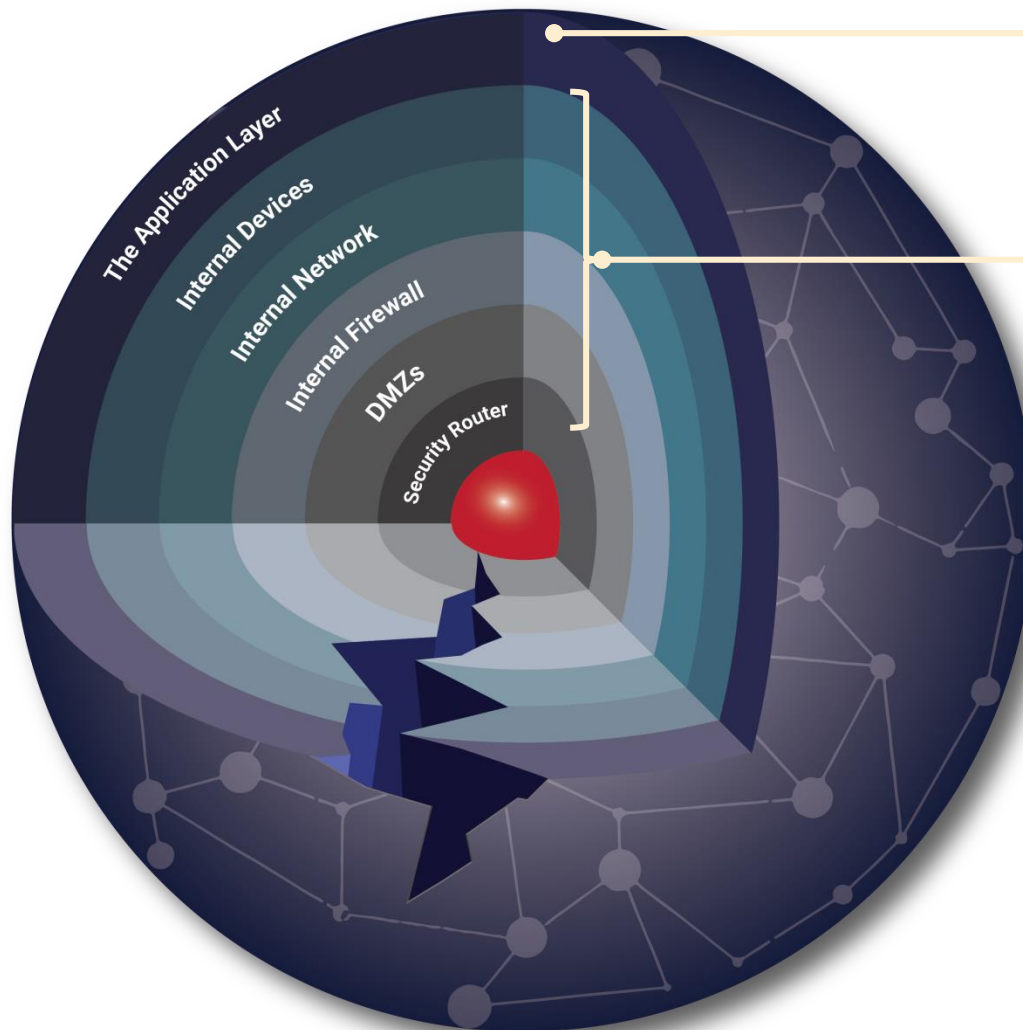

Software Assurance Struggles at the Frontiers

1. Increasing complexity of software assurance
2. Satisfying unique operational mission and business needs
3. Solving the SDLC* software tool chasm
4. Addressing limited spectrum availability
5. Handling the expanding code base
6. Understanding attack patterns, vulnerabilities, and weaknesses
7. Increasing vulnerabilities
8. Designing-in software quality over the lifecycle
9. Reducing technical debt
10. Working in the infancy of software engineering discipline

* SDLC: System Development Life Cycle

Increasing Complexity of Software Assurance

First Line of Defense in Software Assurance is the Application (Software) Layer

84% of breaches exploit vulnerabilities in the Application¹

Yet, funding for IT defense vs. software assurance is 23-to-1²

1. Clark, Tim, *Most cyber Attacks Occur from this Common Vulnerability*, Forbes. 03-10-2015
2. Feiman, Joseph, *Maverick Research: Stop Protecting Your Apps; It's Time for Apps to Protect Themselves*, Gartner. 09-25-2014. G00269825

SEI Technical Themes

SEI Technologies Address DoD Software Assurance Challenges

In the broad sense as defined by the DoD challenges and underscored by the SEI Technical Insight.

Focus Areas:

- the behavior as built: architecture evaluation, code analysis, security patterns, etc.
- the behavior during evolution: system monitoring and self-adaptation, etc.
- the affordability: cost estimation, sustainment work, etc.
- the quality: defect modeling, architectural fault modeling, requirements engineering, etc.
- the mission success: acquisition support, acquisition dynamics, acquisition and architecture alignment, etc.

Satisfying Unique Operational Mission and Business Needs

Practical Answers for a Complicated World – Intelligent Integrated Solutions

Handling the Expanding Code Base

Software Is Dramatically Expanding with Limited Natural Governance

Source: David McCandless, Information is Beautiful, 21 September 2016 web retrieval

Understanding Attack Patterns, Vulnerabilities, and Weaknesses

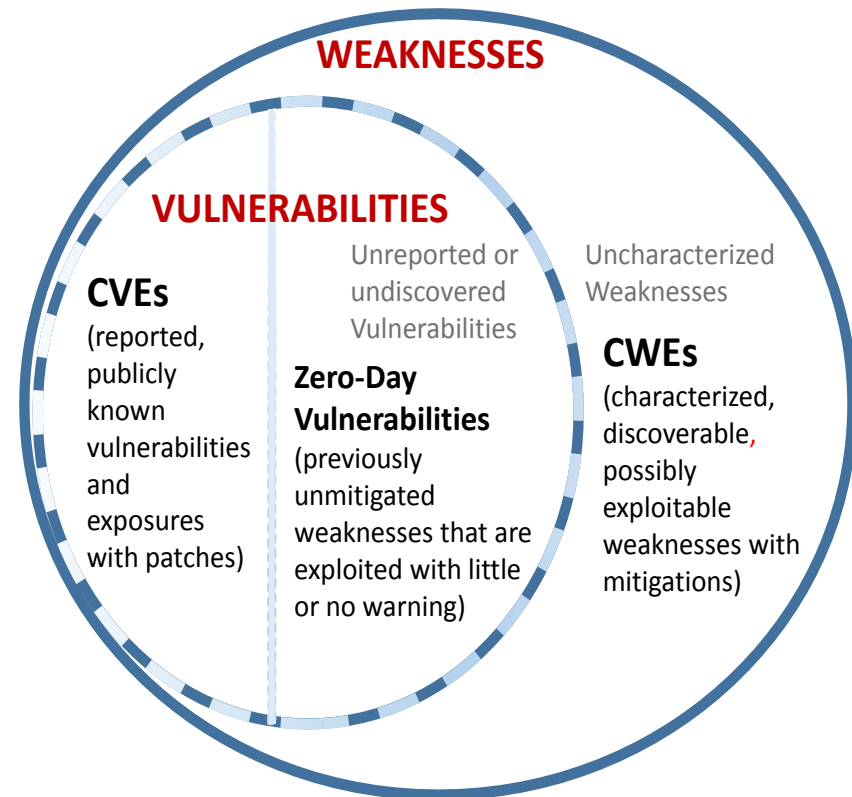

- **“Actions”** include architecture choices; design choices; added security functions, activities, and processes; physical decomposition choices; static and dynamic code assessments; design reviews; dynamic testing; and pen testing.
- Vulnerability is the intersection of three elements: a system susceptibility or flaw, attacker access to the flaw, and attacker capability to exploit the flaw.

Increasing Vulnerabilities

Reported Common Vulnerabilities and Exposures (CVE)

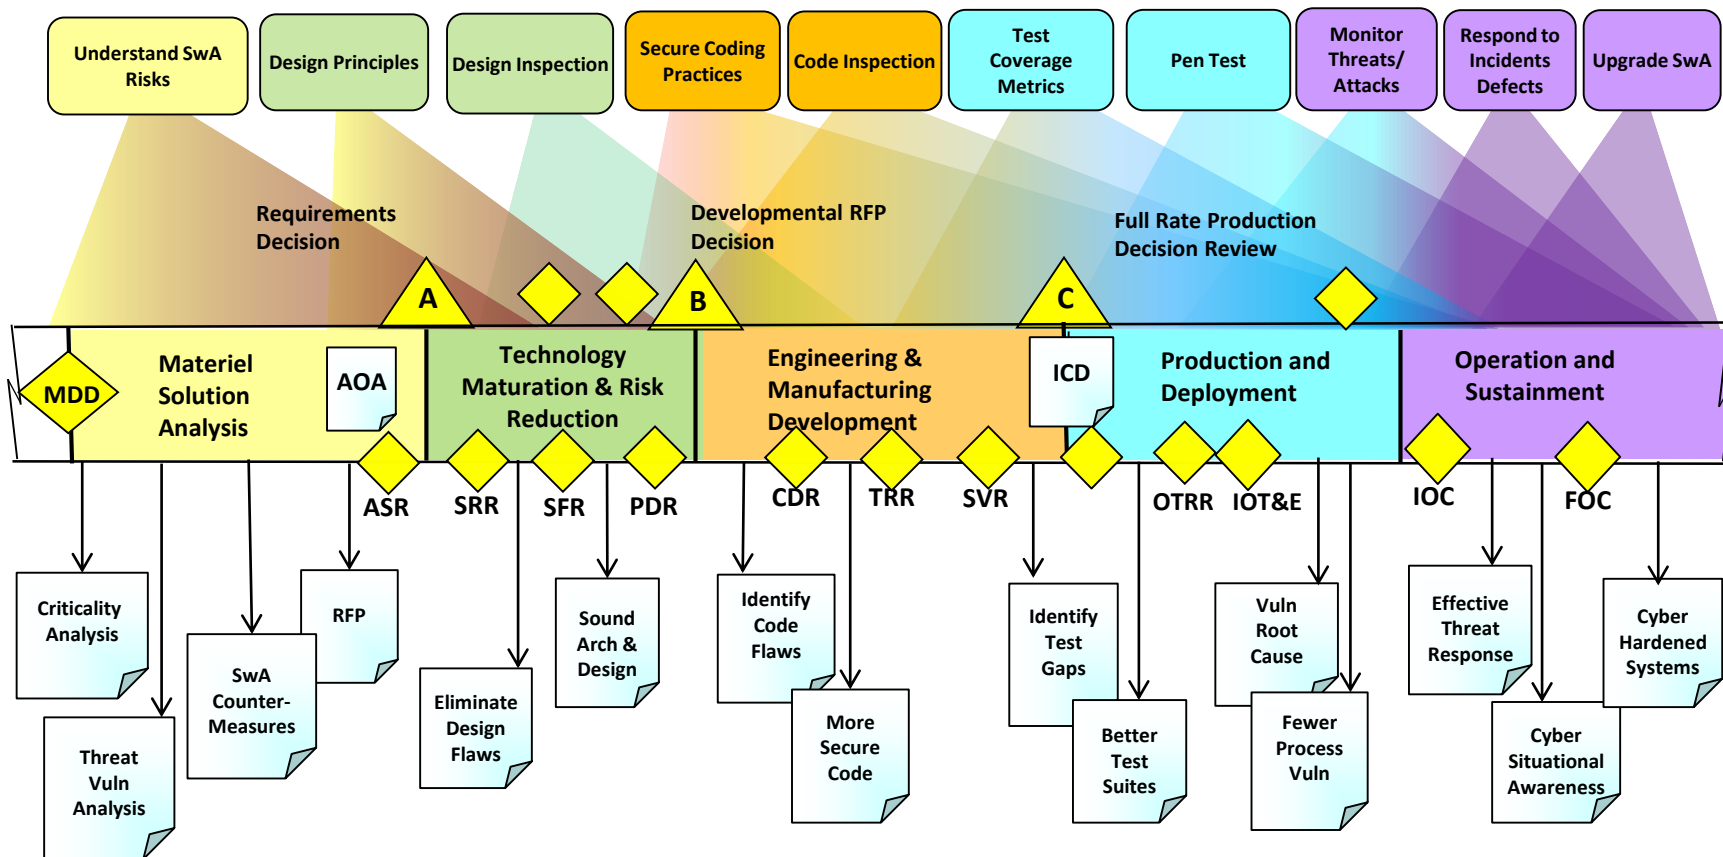

CVE 1999 to 2015

Source: Dr. Robert A. Martin, MITRE Corporation, August 2015

Designing-in System Acquisition Quality Over the Lifecycle

Continuous Engineering Over The Life Cycle

Software assurance must be baked-in throughout entire system lifecycle

Distribution Statement A – Approved for public release. Distribution is unlimited.

SEI Supporting JFAC* Pilot Program

Focused on Solving the SDLC Software Assurance Tool Chasm

- The JFAC is a federation of DoD organizations that have a shared interest in promoting software and hardware assurance in defense acquisition programs, systems, and supporting activities.
- SEI provides experience SEI technical staff to support the dynamic and evolving needs of the JFAC, such as the SDLC software assurance tool chasm

*JFAC: DOD Joint Federated Assurance Center

Reducing Technical Debt

Engineering Assurance into the Fabric of Programs

RDT&E Funding by DAE Tenure Period (1997–2014)

Working in the Infancy of the Software Engineering Discipline

Integrate Software and Systems Engineering with a Focus on Cyber

	Physical Science	Bioscience	Computer/Software/Cyber Science
Origins/History	Begun in antiquity	Begun in antiquity	Mid-20th century
Enduring Laws	Laws are foundational to furthering exploration in the science	Laws are foundational to furthering exploration in the science	Only mathematical laws have proven foundational to computation
Framework of Scientific Study	Four main areas: astronomy, physics, chemistry, and earth sciences	Science of dealing with health maintenance and disease prevention and treatment	<ul style="list-style-type: none"> • Several areas of study: computer science, software/systems engineering, IT, HCI, social dynamics, AI • All nodes are attached to and rely on a netted system
R&D and Launch Cycle	10–20 years	10–20 years	Significantly compressed; solution time to market must happen very quickly

HCI: human–computer interaction; AI: artificial intelligence

Source: SEI
