#### **Deepfakes Detection Team**

Shannon Gallagher Data Scientist

**Dominic Ross** Multi-Media Design and Communications Lead

Jeffrey Mellon Machine Learning Research Scientist

Catherine Bernaciak Senior Machine Learning Research Scientist

## Deepfakes Are "Believable Media Generated by Deep Neural Networks" [Mirsky and Lee 2020]

**Detecting Deepfakes** 

Shannon and Dominic discuss what deepfakes are and how their team is building artificial intelligence and machine learning technology to distinguish real from fake. They share well-known examples of deepfakes and discuss what makes them distinguishable as fake. A Dive into Deepfakes

Shannon and Dominic discuss deepfakes, their exponential growth in recent years, their increasing technical sophistication, and the problems they pose for individuals and organizations. They also discuss the SEI's research in this area.

Catherine and Dominic describe the technology underlying the creation and detection of deepfakes and assessment of current and future threat levels.

#### **Deepfakes** Are Dangerous

**Conceptual Example of a Faceswap Deepfake** The target's face is placed on the source's face.

#### **Potential Dangers**

- Impersonation of political figures and celebrities (e.g., mayor of Kyiv)
- Defamation of citizens
- Mis-, dis-, and mal- information

>700k hours of video are uploaded to the web every day!

#### We need fast and reliable detectors.

Spoofing State-Of-The-Art Face Synthesis Detection Systems         • CNN-generated images are surprisingly easy to spot for now		org
Sort by relevance Sort by date	FakeSpotter: A Simple yet Robust Baseline for Spotting AI-Synthesized Fake Faces     FakeLocator: Robust Localization of GAN-Based Face Manipulations via Semantic Segmentation Networks     with Bells and Whistles		f.com
Any type Review articles	Media Forensics and DeepFakes: an overview     Face X-ray for More General Face Forgery Detection     Solution description		
	In general solution is based on frame-by-frame classification approach. Other complex things did not work so well on public leaderboard. Face-Detector		
	MTCNN detector is chosen due to kernel time limits. It would be better to use S3FD detector as more precise and robust, but opensource Pytorch implementations don't have a license.

#### But Reproducing Results Is...Difficult

- Data and formats
- Sparsely documented code
- Changes to packages like opencv2, pillow, and others
- Changes to backends like PyTorch and TensorFlow
- Hardware

The best methods come with a docker run script, but even that can be difficult.

Takeaway: It is difficult to compare methods side by side (e.g., benchmarks).

## Our Deepfake Detection Pipeline (DDP) Creates Benchmarks

One Method = One Docker Image **Easily Digestable by** Data Docke Volume (Read Only) Docker **Stats Programs** Volume 🕇 Reproduce (e.g., .csv) Docker Volume ANALYSIS DATA MODELING = OUTPUT/WRITE/ COLLECTION PRE-PROCESSING STORE Output folders Summarize Download Split data into TRAINING PREDICTING for model results with TP, Docker raw data train/val/test Volume TN, FP, FN, F1, parameters and and store it. Train model Use fully trained predicted accuracy, RoC, model to make parameters results. graphs, etc. predictions on on train and hyperparameters train/val and/or on val. test sets. DATA CACHING EXAMPLE IMAGES Run files with all model VERSIONING Store some arguments and log files Store easily method-specific with all run arguments, accessible pre-processing parameters, gpus used, example time taken, model used, steps. images. etc. data trained on. PLUG-AND-PLAY INPUT OUTPUT **DETECTOR ALGORITHMS** 

#### DDP is reproducible, portable, and modular.

DDP's backend is <u>SEI's Juneberry</u>.

#### Several Publicly Available Data Resources

Source	Format	Amount	Label(s)	License?
DeepFake Detection Challenge (DFDC)	.mp4	100k+ Videos	Real/Fake	Yes
<u>Celeb-DF</u>	.mp4	5600+ Videos	Real/Fake	Yes
StyleGAN3	.png	Generate Your Own Portraits	Fake	Yes
Flickr-Faces-HQ	.png and .json	70k Portraits	Real	Yes

#### A Look at the "Average" Faces

- Hairline
- Edges of eyes
- Corners of mouth
- Chin
- Eyebrows
- Nose
- Boundaries

#### AVG(REAL) - AVG(FAKE)

**RESEARCH REVIEW** 2022

### We've Noticed a General Trend in Detection Methods

1. Find the face.

- 1. Find face the face.
- 2. Extract facial landmark(s) and normalize them.

- 1. Find the face.
- 2. Extract facial landmark(s) and normalize them.
- 3. Apply masking and/or add noise.

- 1. Find the face.
- 2. Extract facial landmark(s) and normalize them.
- 3. Apply masking and/or add noise.
- 4. Send to a pre-trained image detector.

The ResNet 18 chart is reused with permission from Zachary C. Lipton, co-author of *Dive into Deep Learning*.

#### Pre-Trained Models Available to DDP

<u>AlexNet</u>	<b>MNASNet</b>
<u>ConvNeXt</u>	MobileNet V2
<u>DenseNet</u>	MobileNet V3
<u>EfficientNet</u>	<u>RegNet</u>
EfficientNetV2	<u>ResNet</u>
<u>GoogLeNet</u>	<u>ResNeXt</u>
Inception V3	ShuffleNet V2

**SqueezeNet** 

**SwinTransformer** 

VGG

VisionTransformer

**Wide ResNet** 

- 1. Find the face.
- 2. Extract facial landmark(s) and normalize them.
- 3. Apply masking and/or add noise.
- 4. Send to a pre-trained image detector.
- 5. Fine-tune it.

The ResNet 18 chart is reused with permission from Zachary C. Lipton, co-author of *Dive into Deep Learning*.

1. Find the face.

- Extract facial landmark(s) and normalize them.
- 3. Apply masking and/or add noise.
- 4. Send to a pre-trained image detector.
- 5. Fine-tune it.
- 6. Evaluate it.

This chart is reused with permission from Zachary C. Lipton, co-author of *Dive into Deep Learning*.

#### Preliminary Results with DDP

	Accuracy (%) of Fine-Tuned ResNet							
	Tested on							
Trained on	Data Set	Celeb DF v1	Stylegan2	Stylegan3-t	Stylegan3-r	DFDC Pt. 0		
	Celeb DF v1	99.1	44.2	44.2	44.0	51.2		
	Stylegan2	24.1	98.7	52.9	48.4	57.4		
	Stylegan3-t	16.7	69.7	96.7	84.0	7.0		
	Stylegan3-r	16.9	68.0	89.0	97.2	7.0		
	DFDC Pt. 0	68.1	57.4	57.5	57.5	88.7		

**Next Steps** 

- Model robustness
- Video-specific detectors
- Improved detectors via ensemble models

Summary

- Deepfake detection methods need better benchmarks
  - Accuracy, cost, time
- We are doing that via DDP and Juneberry:
  - Data collection
  - Data transformation
  - Modeling
  - Evaluation
- Preliminary results confirm that generalizability is a problem.
  - We expect to improve models with ensemble detectors via DDP.
