Secure Software by Design Event Opens Call for Presentations and Registration

**March 29, 2023**—The CERT Division of the SEI has opened registration and the call for presentations for *Secure Software by Design*, a two-day live, in-person event on June 12 and 13 at the SEI's Arlington, Va., location.

The *Secure Software by Design* event promotes making security an integral aspect of the entire software lifecycle as a result of following deliberate, intentional engineering processes rather than addressing security in individual stages as one-off activities. “This event will discuss application threat modeling, development of security requirements, secure software architectures, DevSecOps, secure development platforms and pipelines, software assurance, secure coding practices, software testing, and more,” said the CERT Division’s Tim Chick.

Presentation submissions are due by April 14.
