2023 Year in Review Highlights Impact of SEI Research and Development

April 24, 2024—The SEI last week released the 2023 SEI Year in Review, a report highlighting some of the SEI’s most noteworthy research and development in software engineering, cybersecurity, and artificial intelligence at the intersection of government, industry, and academia in fiscal year 2023.

The articles show how the SEI combines its body of knowledge with external material and systems engineering to deliver impact to Department of Defense and other U.S. government organizations and end users. Leveraging collaboration, the SEI advanced the state of the art and practice of software and related disciplines:

- generative AI
- vulnerability prioritization and management
- UEFI security
- open source software
- U.S. leadership in software engineering and AI engineering
• support for the Long Range Standoff Program
• AI trustworthiness for warfighters
• large language models for intelligence
• responsible AI
• safety-critical system software architecture

International Conference on Conceptual Modeling ER 2024 Opens Call for Papers
The long-running event is accepting submissions on how artificial intelligence and machine learning are revolutionizing conceptual modeling.

SEI Event to Collaborate on Approaches to Improve Software Security
Registration and a call for presentations are open for Secure Software by Design, a two-day, in-person SEI event on August 6 and 7.

Upcoming Events

Zero Trust Industry Days 2024, May 14-15
The SEI hosts the Zero Trust Industry Days request-for-information exercise to collect information from those who develop solutions for implementing a zero trust architecture.

Secure Software by Design, August 6-7
Collaborate on improving software security with two on-site days of panel discussions and presentations plus two optional on-site days of training.

International Conference on Conceptual Modeling (ER 2024), October 28-31
The SEI will host the main international forum for discussing the state of the art, emerging issues, and future challenges in research and practice on conceptual modeling.
