3 API Security Risks and Mitigations

July 17, 2024—Increased use of microservice architectures has made public-facing application programming interfaces (APIs) more common than ever. They enable scalable, flexible applications, but APIs present a potentially easy target for attackers. A new SEI Blog post presents mitigations for the top three API security risks: third-party software integrations, cascading failures, and increased network attack surface.

“To facilitate implementation of a zero trust strategy in a network requires a focused effort to identify API-specific vulnerabilities,” writes the SEI’s McKinley Sconiers-Hasan, the author of “3 API Security Risks and Recommendations for Mitigation” and a longer report from which the blog post is excerpted.

Upcoming Events

Secure Software by Design, August 6-7
Collaborate on improving software security with two on-site days of panel discussions and presentations plus two optional on-site days of training.

Insider Risk Management Symposium 2024, August 14
Join us to hear about the latest challenges and best practices in insider risk
management from recognized leaders in insider threat research and development.

**DevSecOps Days Washington D.C. 2024**, September 18
This free, in-person event in Arlington, Virginia, will teach how to integrate security into DevOps practices and transform DevSecOps journeys.

**International Conference on Conceptual Modeling (ER 2024)**, October 28-31
The SEI will host the main international forum for discussing the state of the art, emerging issues, and future challenges in research and practice on conceptual modeling.
